Central Stock File

All your stock is held in one central stock file. So at any one time, you can quickly look up items in stock. You can set minimum stock levels and the system will flag when you need to re-order.

Customer Enquiries

All you need to know to answer enquiries is at the touch of a button. Look up parts or a standard job from the library. The result is big savings on time and better service - the route to profit.

Estimates – Price it once

Produce estimates quickly and easily. Once you've shown an item on an estimate, that's it. No more looking up prices again and again. Estimates are then seamlessly converted to live jobs.

Job Details – No More Duplication of Work

From estimate to job sheet to invoice to service history – the information carries through the system without any effort from you.

Hold Standard Job Libraries

Build and store standard job libraries, parts and labour for regular servicing jobs. Up to the minute prices and the right parts are there at your fingertips.

Schedule Your Jobs

Allocate your resources for maximum efficiency. Parts and labour utilisation reporting helps planning - to ensure that the right parts and people are in the right place at the right time.

Warranty Jobs

Invoice third parties for work done on warranty jobs whilst retaining the history on the unit itself. Over time, build full service histories - making life easier for you and adding value to your customers.

Comprehensive Reporting

Monitor current cost against estimate. Other reporting includes job start and due date, job type, job progress summary, parts and labour utilisation and profit centre reporting.
